

Task 1 (phase 2)

Objective 1: *Select one of the topics* which you defined in the previous task. Choose the topic which interests you most, about which you are able to find enough information, and which you think you are able to finish in the allotted time. Use the SearchAssist system to find information to help you to decide on the topic, and save sources if needed using “*save result*”. Write down the topic in the text box below.

Objective 2: After having selected a topic you ask yourself the question “what is it that I want to find out about this topic?” Search the web using the SearchAssist system and *formulate a specific question* you would like to ask about this topic. You can save any pages you encounter which are useful for answering this question using “*save result*”.

1. Selected topic	
2. Specific question
